ArcTitan Overview

Most IT departments aren't short of email related tasks: maintaining an efficient email service, not overloading the email server, keeping important data secure, finding lost email, having a reliable back up, providing business continuity and disaster recovery for email, managing eDiscovery, recovering email from PST files. Email management can be costly in terms of time and resources.

ArcTitan has a long list of great features built in to improve your business, but the bottom line is: ArcTitan saves you time and money, makes you more compliant and helps your users to be more productive.

> " The number of emails sent and received per day is set to rise from 205 billion in 2015 to almost 250 billion in 2020. "
>
> **Gartner 2020 Email Report**

ArcTitan can help.

ArcTitan is a focused email archiving tool that can be tailored to match multiple business purposes and function. We capture and store every message received by an organisation on a separate, secure server. High security and audited access mean that information can't be altered. With a complete focus on email archiving backed by unmatched expertise, ArcTitan is designed to meet compliance needs, improve productivity and enable users, with fast search & retrieval of information when it's needed most.

Compliance at the Core

Anything stored in ArcTitan is tamperevident, meaning it can proven that emails from the archive are original, and haven't been doctored in any way. Emails from ArcTitan are even admissible as evidence in court.

High Return on Investment

We only license per active user (while retaining a complete archive of every mailbox), allowing a much more cost effective format. Routine maintenance runs 50% quicker whilst storage can be reduced by up to 75%, leading to significant returns on investment for an organisation.

Reduce Data Stores

We ingest data from all sources, including PSTs, then compress it and de-duplicate any identical copies. This removes the pain of searching multiple locations and leads to massive reductions in storage. The use of stubbing removes large email attachments, replacing them with a hyperlink, again helping lead to 50-75% storage savings.

GDPR Compliant

At TitanHQ, we have made some tweaks to our solution to make sure that it complies fully with this legislation, which also ensures the compliance of our customers when it comes to their email data.
